Tenth Miles International Symposium

Impact of recombinant molecules on science and society

This Symposium will be held at Kresge Auditorium, Massachusetts Institute of Technology, Cambridge, Massachusetts, USA, from 8 to 10 June 1976 and will address the mechanism of recombination of genomes at the molecular level and the implications of this basic phenomenon in living systems, including viruses, in medicine, agriculture, and industry. The generation, by this mechanism, of new strains, or possibly, new species of plant or animal species with different biological, biochemical, immunological, and related properties has great scientific and societal significance.

For further information write to: Edward G. Bassett, Ph.D., Symposium Co-ordinator, Miles Laboratories, Inc., Elkhart, Indiana 46514 USA (219) 264–8460.

Conference on Clinical Delineation of Birth Defects

The University of British Columbia, Faculty of Medicine, and the National Foundation—March of Dimes, 1976 Conference on Clinical Delineation of Birth Defects, 23–25 June 1976.

For Information write to Dr R. Brian Lowry, Clinical Genetics Unit, 855 West 10th Avenue, Vancouver, B.C. V5Z 1L7, Canada.
