NOTICE TO ADVERTISERS
Applications for advertising space and rates should be made to the Advertisement Manager, Journal of Medical Genetics, BMA House, Tavistock Square, London WC1H 9JR.

NOTICE TO SUBSCRIBERS
Journal of Medical Genetics is published monthly. The annual subscription rates are £163-00 (US $277-00). Orders should be sent to The Subscription Manager, Journal of Medical Genetics, BMA House, Tavistock Square, London WC1H 9JR. Orders can also be placed with any leading subscription agent or bookseller. (For the convenience of readers in the USA subscription orders with or without payment may be sent to British Medical Journal, Box 560B, Kennebunkport, Maine 04046, USA. All enquiries, however, must be addressed to the Publisher in London.) Subscriptions may be paid by Access, Visa, or American Express by quoting on the order the credit or charge card preferred together with the appropriate personal account number and the expiry date of the card. All enquiries regarding air mail rates and single copies already published should be addressed to the Publisher in London. Second class postage paid, Rahway N J Postmaster: send address changes to Journal of Medical Genetics, c/o Mercury Airfreight International Ltd Inc, 2323 Randolph Avenue, Avenel, NJ 07001, USA.

22, in situ hybridisation and molecular studies, 284 abst
in haematological malignancy, 274 abst
of locus D17S122, in Charcot-Marie-Tooth disease type Ia, South Wales families, 12
partial, for 5q, and monosomy for 12p, in liveborn child, as result of complex five breakpoint chromosome rearrangement in parent: case report, 739
partial monosomy 13 mosaicism, associated with relatively mild clinical malformation: poster, 213
Truncal obesity, nasal hypoplasia, sparse hair, genital hypoplasia, and severe mental retardation, unknown syndrome: dysmorphology report, 676
Tuberous sclerosis computer simulation of linkage and heterogeneity, 867
echocardiography and genetic counselling, 487
imprinting a mechanism? 272 abst
three putative determining loci on chromosomes 9q, 11q, and 12q, 861
Tumour suppressor genes, and constitutional ring chromosome, 879
Tumourigenesis, and metastasis, in vivo cell fusion, 204 abst
Turner’s syndrome, molecular diagnosis, 547
Twin pregnancy, IVF, discordant cytogenetics: poster, 212
Twins, high proportion in carriers of fragile X syndrome: letter, 599
Ulnar ray defects with midline malformations, and Weyers' ulnar ray/oligodactyly syndrome: syndrome of the month, 659

Upper limb defect associated with developmental delay, unilateral poorly developed antihelix, hearing deficit, and bilateral choroidal coloboma, new syndrome: case report, 589

Urethral duplication, mental retardation, facial dysmorphism, and progressive vitiligo, without chromosomal breakage or immunodeficiency: case report, 592

Uveal melanoma, cytogenetics: poster, 207

Variation, normal, limits, and 9qh+ karyotype: poster, 209

Vitiligo, progressive, mental retardation, and uveal melanoma, with retinal pigment epithelial atrophy, syndrome: letter, 679

Vocal cord paralysis, and distal spinal muscular atrophy: case report, 197

von Hippel-Lindau disease
I. Genetic linkage analysis, II. Construction of long range physical map around VHL locus, 276 abst modification of risk with flanking DNA markers, 274 abst prenatal diagnosis, 282 abst presymptomatic diagnosis with flanking DNA markers, 902

Waardenburg syndrome
child, deletion of chromosome 2: poster, 211 type I, locus, 273 abst type I, splotch locus mouse mutant models: review article, 145

Weaver-Smith syndrome, 4 new cases: syndrome of the month, 332

Werdnig-Hoffmann disease, prenatal prediction using linked polymorphic DNA probes, 171

Weyers' ulnar ray/oligodactyly syndrome, and association of midline malformations with ulnar ray defects: syndrome of the month, 659

Wiedemann-Rautenstrauch syndrome, in two sibs, possibilities of prenatal diagnosis by ultrasound: case report, 434

Williams-Beuren syndrome, girl with phenotypic features, and de novo t(X;21)(q12;q11): case report, 747

Williams syndrome
and chromosome 18: letter, 679 tentative locus at 4q33→q35.1: case report, 253 and unbalanced 13;18 translocation: case report, 63

Wolf-Hirschhorn syndrome
paternal origin of de novo deleted chromosome 4, 53 recurrence, 272 abst recurrent, submicroscopic translocation t(4;10) responsible for identified by allele loss and fluorescent in situ hybridisation, 451

and sex reversal complex rearrangement 205 abst cytogenetic and molecular study, 400

X linked
 α thalassaemia/mental retardation (ATR-X) syndrome: letter, 357 hypophosphataemia, linkage heterogeneity, 278 abst lymphoproliferative disease, X inactivation, 608 mental retardation, with aphasia exhibiting genetic linkage to chromosomal region Xp11, non-specific, 629 mutation screening using single strand conformation polymorphism analysis, 281 abst ocular albinism assessment of clinical methods of carrier detection, 276 abst genetic mapping, linkage analysis in British families, 552 progressive cone dystrophy, with specific attention to carrier detection, 291 retinitis pigmentosa, phenotype-genotype correlations, 615 rod and cone dysfunction, linkage analysis, 278 abst X linked syndrome, new, with mental retardation and craniofacial dysmorphism: case report, 736

XX gonadal dysgenesis and XY gonadal dysgenesis compared for height, and Y specific growth gene, 539
Notice to contributors (general guidance)

The readership of Journal of Medical Genetics is worldwide and covers a broad range of workers, including clinical geneticists, scientists in the different fields of medical genetics, clinicians in other specialties, and basic research workers in a variety of disciplines. It publishes original research on all areas of medical genetics, along with reviews, annotations, and editorials on important and topical subjects. It also acts as a forum for discussion, debate, and information exchange through its Letters to the Editor columns, conference reports, and notices. The editor is always grateful for suggestions or criticisms from readers and authors.

ORIGINAL PAPERS
These may be on any aspect of medical and human genetics and may involve clinical or laboratory-based and theoretical genetic studies. Guidance on length can be obtained from studying the Journal. Shorter articles may be most appropriately submitted as case or family reports, not exceeding 1000 words, with no more than three figures, one table, and 10 references. Short reports should not exceed 500 words, with a single illustration. Contributions may also be submitted as Hypotheses, Technical Reports, or Short Communications. Accelerated publication of papers of particular importance will be considered.

REVIEWS
Short or longer reviews on all aspects of medical genetics are welcome, but should be discussed first with the Reviews Editor. Contributions on historical topics, or which could form part of specific series, are particularly acceptable.

ANNOTATIONS AND EDITORIALS
These are written or commissioned by the editors, but suggestions are welcome regarding possible topics and authors.

LETTERS
These are welcome on any relevant topic and will be published rapidly. Those relating to or responding to previously published items in the Journal will be shown to those authors, where appropriate. Although a paper submitted as an original report may sometimes be published in shortened form as a letter, it is preferable for initial submission as a short report, unless directly related to a previous journal article.

CONFERENCE REPORTS
Reports from small to medium-sized meetings, especially international workshops on specific topics, will be appreciated. Authors intending to submit conference reports should liaise with the Reviews Editor to avoid duplication.

SPECIAL ISSUES AND SUPPLEMENTS
These are published at intervals on topics of particular relevance. Enquiries are welcome from those organising workshops or symposia who may have material suitable for such an issue.

BOOK REVIEWS
The Journal aims to review as wide a range of relevant books as possible. Authors or others wishing to check if a book has been received may check with the Journal office. Computer programs and databases, official reports, and other material relevant to the field may all be appropriate for review. Enquiries about such items are welcome.

OBITUARIES
The Journal would like to be informed rapidly of the death of any senior or important person in the field of medical or human genetics, regardless of geographical location. In general, a brief notice would be published rapidly, with a longer obituary as appropriate. Since such deaths often occur many years after retirement, it will be appreciated if readers will contact the Reviews Editor so that appropriate arrangements can be made.

NOTICE
Notice of forthcoming meetings in different countries should be sent as far ahead as possible. Extensive descriptions should be placed as advertisements.

CALLS FOR PATIENTS
The Journal receives an increasing number of requests to publish notices of proposed studies involving patients or families with rare genetic disorders. In general such notices are appropriate only for major international collaborations; the proposer should ensure that such a notice does not conflict with existing studies or proposals.

ILLUSTRATIONS
High quality black and white photographs are preferred for most illustrations, particularly of patients. Colour illustrations can be accepted; however, authors are asked to pay part of the cost, so their desirability should be discussed in advance of submission. All identifiable photographs of patients must be accompanied by written permission for use.

SPECIFIC INSTRUCTIONS TO AUTHORS
Papers, which should be in triplicate and in the Vancouver style (BMJ 1988;296:401-5), should be sent to the Editor, Journal of Medical Genetics, BMA House, Tavistock Square, London WC1H 9JR and not to individual editors, with the exception of papers from the USA, which can be submitted to the North American Editor, Dr P M Conneally, Department of Medical Genetics, James Whitcomb Riley Hospital for Children RR129, Indiana University Medical Center, Indianapolis, Indiana 46223, USA. Submission of a paper will be held to imply that it contains original work which has not been previously published. It is the responsibility of the submitting author to ensure that all co-authors are agreeable for their names to appear on the manuscript. A FAX number should be provided. Permission to republish must be obtained from the Editor.

Where a patient(s) with a structural chromosome abnormality is described, the availability of a cell line(s) should be stated in the text together with its identifying number, cell bank, and, where appropriate, contact person.

All contributions should be accompanied by an abstract (preferably structured) giving the main results and conclusions. Type-scripts should be at least double spaced with wide margins. One page proof will be sent to the author submitting the paper and alterations on the proof, apart from printer’s errors, are not permitted. Reprints may be ordered when the proof is returned.

Figures should be kept to a minimum and should be numbered consecutively in Arabic numerals. Legends should be typed on a separate sheet.

Tables should not be included in the body of the text, but should be typed on separate pages and numbered with Arabic numerals. A legend should be provided.

References should conform precisely to the style current in this journal. Authors are responsible for the accuracy and completeness of their references as these will not be checked by the Editorial office.

NOTES ON NOMENCLATURE
Authors should refer to the following publications.
