## ADVANCES IN THE TREATMENT OF INBORN ERRORS OF METABOLISM

edited by **M. d'A. Crawford, D.A. Gibbs** and **R.W.E. Watts**,  
*all of MRC Clinical Research Centre, Harrow, U.K., Division of Inherited Metabolic Diseases*

The treatment of inborn errors of metabolism poses many problems, and in this book international authorities discuss and assess these in the light of recent scientific and clinical advances.

Multidisciplinary research in biochemistry, cell biology, paediatrics and genetics is identifying treatment methods through a number of different approaches, and this book emphasises those methods which are already clinically applicable, and those which it is hoped will modify clinical practice in the future. The book is method-oriented and concentrates on the management of groups of diseases although individual diseases are discussed insofar as they illustrate general principles.

Proceedings of the 2nd Clinical Research Centre Symposium held in September 1981.

### **ATAXIA-TELANGIECTASIA: A Cellular and Molecular Link Between Cancer, Neuropathology and Immune Deficiency**

edited by **B.A. Bridges**, *MRC Cell Mutation Unit, University of Sussex, Brighton*,  
and **D.G. Harnden**, *Department of Cancer Studies, University of Birmingham*

Ataxia-telangiectasia is recognised as a very important inherited disease because it confers susceptibility to cancer and increases sensitivity to ionised radiation. This book reviews current developments in the clinical and scientific aspects of the disease, which contribute greatly to our understanding of cancer mechanisms. There has been no previous publication devoted to this subject.

### **THE ROLE OF THE MAJOR HISTOCOMPATIBILITY COMPLEX IN IMMUNOBIOLOGY**

edited by **M.E. Dorf**, *Department of Pathology, Harvard Medical School, Boston, Massachusetts*

Designed to provide a broad background of material which will permit students and researchers to obtain a basic understanding of the rapidly expanding and complex discipline of cellular immunology and immunogenetics. The various chapters provide in-depth analysis of many aspects of these disciplines. The introductory chapters detail the genetics and biochemistry of the human and murine major histocompatibility systems.

# Human Immunology

## AIMS AND SCOPE

**Human Immunology** is devoted to an understanding of the ontogeny, mechanisms, regulation and control of immune responsiveness. Since the major histocompatibility complex, MHC, is central to many of these processes, principal emphasis will be on the components of this supergene and on model systems based on the MHC of other species. Focusing on model systems and genetic studies, and encouraging intercommunication between workers in different disciplines, **Human Immunology** provides a unique forum for the exchange of vital information.

**Abstracted/Indexed In:** Current Contents (Life Sciences), Biological Abstracts, Chemical Abstracts, and Excerpta Medica.

**Subscription Information:** Institutional rate: Vols. 4 and 5 (8 issues) 1982: \$156.00. Personal rate: Vols. 4 and 5 (8 issues) 1982: \$94.00.

Subscribers outside the United States should add \$12.00 for surface mail, \$32.00 for air delivery to Europe and Canada, and \$38.00 for air delivery to the rest of the world.

## SELF-BINDING CASES

*for easy and instant reference*

Made to hold one volume (6 issues) of your **JOURNAL OF MEDICAL GENETICS**. Each case is handsomely bound with a colour to complement the journal. Spring nylon cords, to carry the journals, slide freely along the spine of the binder. The name of the journal is gold-blocked on the spine. Date labels are also provided.

**Price:** Inland £4.00; Overseas US\$12.00  
including postage (air mail overseas) and packing
