

We help put you on the map in record time.

The race to discover the genes responsible for specific diseases or traits is accelerating every day. Your lab can work day and night, trying to manually process volumes of genotype data—and still fall behind.

Now Applied Biosystems helps you work smarter, not harder. We've streamlined the linkage analysis process—from sample preparation to genotype scoring—with an automated system that lets you complete linkage projects faster than with manual methods. And your cost per genotype will be significantly lower.

Genotype software is the first automated system that lets you score multiple samples at once, and automatically scores and

Genotype lets you score multiple samples at once, and automatically scores and

Automation: From Sample Prep to Data Analysis

The automated genotyping system integrates our new Genotype software with the proven Model 373 electrophoresis hardware and GENESCAN PCR analysis software. You'll be able to take full advantage of

the new mapping standard—PCR-based microsatellite markers—and the GeneAmp PCR process.

You select the optimal Genotype method and click on "run." Volumes of electrophoresis data are transformed into automatically scored alleles. You'll find the program flexible and fast as you retrieve, edit and transfer your results for further analysis.

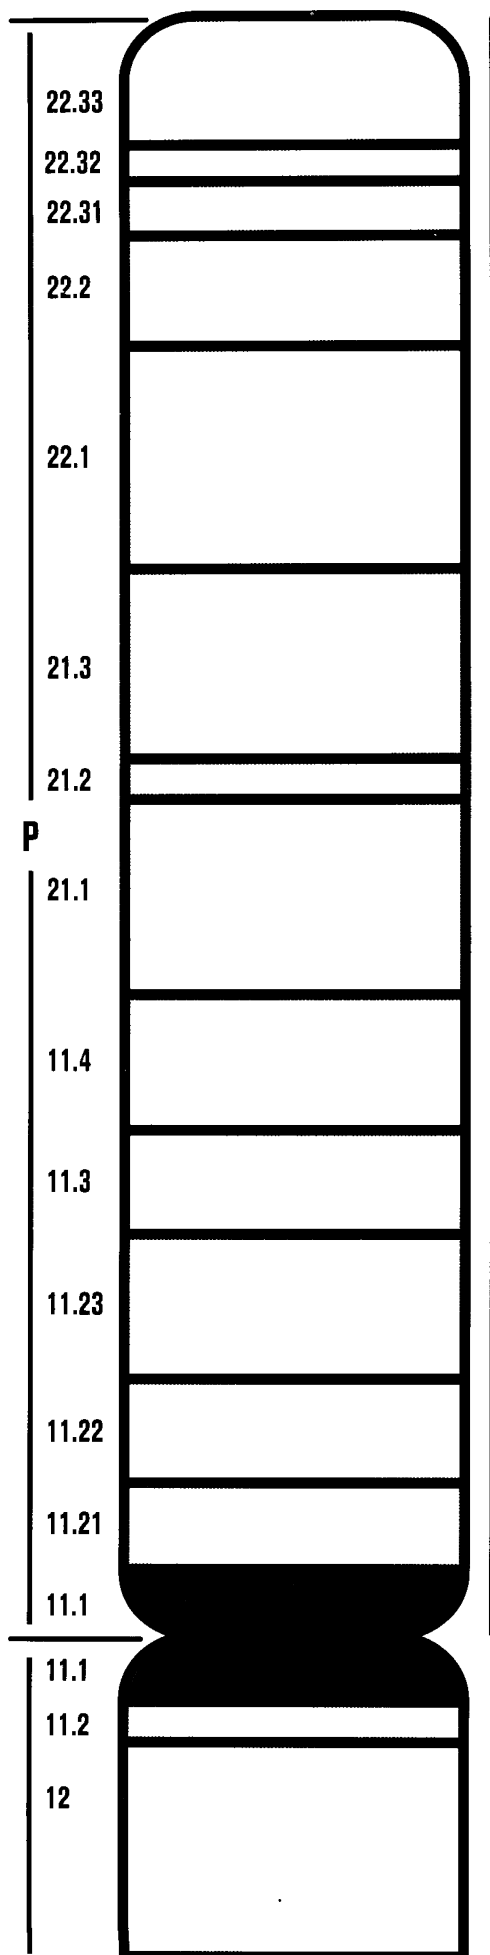

We've also streamlined sample preparation with our PRISM amidites for fluorescent PCR. Because the system is based on our standard four-dye fluorescent technique, you get in-lane controls that ensure the superior accuracy and throughput that radioactive methods can't match.

If your lab needs a faster way to put your gene discovery projects on the map, phone Applied Biosystems Division of Perkin-Elmer at **Australia** 03 898 7777, **Benelux** 01 3465 7486, **Canada** 800 668 6913, **France** 1 49 90 18 00, **Germany** 0 6150 101-0, **Italy** 02 8912 6011, **Japan** 03 3699 0700, **U.K.** 0925 825650, **U.S.** 800 345 5224. Tell us you want our report on lab's automating genetic linkage—fast.

DIAGNOSTIC STRATEGIES FOR COMMON MEDICAL PROBLEMS

*Edited by Robert J Panzer, Edgar R Black,
Paul F Griner*

This book details the logical evaluative steps for interpreting diagnostic information about various common diseases and conditions. In the opening chapters the principles and application of quantitative decision making are outlined. Subsequent chapters discuss these diagnostic techniques in relation to 49 specific medical problems, including acute pancreatitis, coronary artery disease, hyperthyroidism, and erythrocytosis, among others.

ORAL MEDICINE IN PRACTICE

P. J Lamey, M A O Lewis

With the aid of over 200 colour photographs, this large format book gives a detailed description of the presentation, diagnosis and management of a range of commonly seen problems. Topics include: Angular cheilitis; Viral infection; Orofacial pain; Orofacial allergic reactions; Salivary gland disease; Dermatoses and pigmentary disorders; The immunocompromised patient.

DOCTORS, PATIENTS AND THE LAW

Edited by Clare Dyer

As advances in medical science accelerate and patients' expectations rise, medical law is developing rapidly and the number of lawyers who practise in this area is expanding.

Doctors and dentists are now more accountable than ever to the public, their employers and their professional bodies. A group of medical-legal specialists analyse and review developments in medical law and their impact on doctors and dentists.

A COLOUR ATLAS AND TEXT OF CLINICAL MEDICINE

C D Forbes, W F Jackson

This title encompasses the whole of clinical medicine, and, by combining the best features of the colour atlas and medical textbook, provides a visual and textual guide to all major medical disorders.

The book contains 1500 illustrations of medical conditions, accompanied by a succinct but comprehensive text clarifying diagnosis and management issues. Colour illustrations are supplemented where appropriate by radiological, ultrasound and endoscopic images.

Each chapter starts with an illustrated guide to symptoms, signs and investigations, proceeding to cover both common and less common disorders.

RIGHTS AND RESPONSIBILITIES OF DOCTORS

British Medical Association

Doctors have rights and responsibilities and duties and powers which require them to do or not to do certain things in certain circumstances. Doctors' actions, as well as being governed by their professional code, are also regulated by a variety of legislation with which they must comply. Rights and Responsibilities provides a practical guide to the law as it affects doctors. It aims to cover the main areas that are of interest and concern to most doctors.

Designed as a handbook, the style affords easy access to individual topics and offers succinct but comprehensive advice. As well as doctors, medical students, health service administrators, lawyers with an interest in medical law, local authority officers, and others with an interest in the legal aspects of medicine will find this book invaluable.

GENETICS IN MEDICINE

Fifth Edition

M W Thompson, R R McInnes, H F Willard

Genetics in Medicine explains the fundamentals of human genetics - what the genes are, how they behave, what their functions are and what can go wrong.

It then builds on the basics with current applications - how mutations cause disease, how to diagnose and treat genetic disorders, and how to effectively counsel patients and their families. A strong emphasis on molecular genetics guides you to a state-of-the-art understanding of this developing field.

AN INTRODUCTION TO THE SYMPTOMS AND SIGNS OF SURGICAL DISEASE

Second Edition

Norman L Browne

This book contains a description of the techniques of history taking and clinical examination, and a detailed account of the symptoms and signs of common surgical diseases. These descriptions are presented under the same headings used to describe the methods of examination to emphasize and impress on the reader the importance of a systematic approach. The symptoms and signs are then analysed and interpreted to show the reader how to deduce the diagnosis. Photographs (many in colour), line diagrams and revision panels illustrate the text and can be used in their own right for revision.

Journal of Medical Screening

Editor: Nicholas Wald
Wolfson Institute of Preventive Medicine

Associate Editors:

J Chamberlain (UK), N E Day (UK), J E Haddow (US), M Law (UK)

Journal of Medical Screening is a new quarterly journal to be launched in January 1994 by the BMJ Publishing Group to cover all aspects of medical screening and advance the science of the discipline. The journal aims to bring together specialist groups conducting screening research and establish a liaison with health authorities and policy developers. The philosophy of the journal is that screening should be about the prevention of disability and disease, not simply the early detection of disease as an end in itself.

The Journal Aims to Cover:

Principles and theory of medical screening

Research into screening methodology

Development of new screening tests and their quantitative evaluation

All aspects of public health as they relate to screening, including epidemiology, randomised trials, quantitative observational studies, demonstration projects and economic evaluations

Ethical and psychological issues

Management issues

Policy and strategy

SUBMISSION

Papers should be submitted to: Professor Nicholas Wald
Wolfson Institute of Preventive Medicine Medical College of St. Bartholomew's Hospital
Charthouse Square, London EC1M 6BQ, United Kingdom
