Suppl. Fig. 1

Patient 1

Transfusion of red blood cells
Oral iron supplementation
Erythropoietin therapy

On hospital referral
Normocellularity
M/E ratio: 1.5
Dysplastic changes:
erythroid cells

Hypercellularity
M/E ratio: 0.5
Dysplastic changes:
trilineage cells
(diagnosed as MDS)

Hypercellularity
M/E ratio: 2.0
Dysplastic changes:
trilineage cells

Suppl. Fig. 1: Changes in blood count in Patient 1 over time.
